

What We Do

The Aqool Wire is Saudi Arabia's home for clear, credible intelligence on artificial intelligence. We focus exclusively on the Kingdom, how AI is being deployed, regulated, funded, and scaled across ministries, national programmes, and leading enterprises under Vision 2030.

We distill signals that matter: policy moves from **SDAIA** and key regulators; national AI programmes and sector pilots; investment flows from the **PIF** ecosystem and corporate venture arms; and the partnerships shaping Saudi Arabia's AI stack, from data infrastructure to frontier model adoption.

Our work equips **government leaders, corporate executives, investors, and researchers** with decision-ready insight across three service lines:

- **Regulatory Intelligence:** Continuous monitoring and briefings on laws, standards, compliance guidance, and implementation timelines within the Kingdom.
- **Research & Policy Analysis:** Deep dives on priority sectors, energy, health, finance, industry, public services, with clear implications and options for action.
- **Advisory:** Tailored memos, stakeholder mapping, and go-to-market support to align strategies with national priorities and delivery cycles.

We offer timely, actionable intelligence that helps decision-makers move with confidence and pace.
