

THE AQOOL WIRE

The Bloomberg Terminal for Saudi Arabia's AI Ecosystem

Accelerating Vision 2030's AI Momentum

Challenge

Fragmented Information

Billions are fueling Saudi Arabia's AI revolution — yet fragmented data keeps its full potential untapped.

**13+ Saudi entities
managing AI
initiatives**

(SDAIA, MCIT, PIF, HUMAIN, Alat,
Aramco Digital, KAUST, etc.)

**\$100+
billion**

Committed to AI
investments across
Saudi Arabia

**6 parallel data
center initiatives**

**178+ AI
deals**

tracked in Saudi
Arabia in 2024

**\$1.78B
announced at
LEAP 2025**

for AI and digital
talent

**Over 66 goals within Vision 2030 are
directly or indirectly related to data and AI**

**15.6% of the Kingdom's GDP comes from the
digital economy, underscoring the Kingdom's
rapid shift toward data-driven growth.**

**34% of MENA's
early-stage AI
ventures are in Saudi
Arabia**

10+ separate investment vehicles

(PIF, HUMAIN, Sanabil, Aramco Ventures, Wa'ed, SVC, etc.)

\$42.4B+ in AI investments

deployed since 2022

The Cost of Fragmentation

When data is fragmented, investors miss opportunities – and nations miss investment.

68% of executives say siloed data and disconnected technologies hinder their ability to identify growth opportunities.

75% fail rate for large-scale government digital projects.

Large firms allocate up to 10% of annual revenue to market research and opportunity identification, often duplicated across divisions.

Solution

The Aqool Wire

Built to complement SDAIA's Data Lake by integrating private-sector, academic, and global data to help investors, innovators, and policymakers identify opportunities across the Kingdom.

1

Visibility: Makes Saudi Arabia's AI opportunities visible to local and global investors and innovators.

2

Clarity: Enables data-driven decisions through the Insight Co-Pilot, using natural language to uncover insights and simulate outcomes.

3

Attraction: Reveals how AI investments, infrastructure, and partnerships connect across sectors.

***Turning Data into
Foresight.***

***Turning Foresight into
Opportunity.***

Clarity That Moves Capital

From raw information to real-time intelligence for Vision 2030.

Product #1 - **AI Investment Observatory**

The Kingdom's first interactive AI intelligence platform, connecting capital flows, policies, and partnerships to spotlight the next wave of investment opportunities.

Product #2 - **Infrastructure & Data Sovereignty Map**

A dynamic dashboard mapping the Kingdom's compute capacity, data-center build-outs, and cloud capabilities.

Product #3 - **The Insight Series**

An AI-driven foresight engine powered by the Insight Co-Pilot, enabling conversational access to data and predictive intelligence for Vision 2030.

Product # 1

AI Investment Observatory

Real-time intelligence revealing where AI policy, capital, and opportunity converge.

Core Features

1. **Opportunity Radar:** Predictive AI engine that spots *emerging opportunity* zones where policy momentum meets private investment potential.
2. **Investment Intelligence Engine:** Real-time visualization of AI capital flows by sector, region, and investor, revealing where funding is accelerating and where gaps remain.
3. **Regulatory Intelligence:** AI policy tracker that turns complex regulations into clear, actionable guidance for market entry.

Private Sector Impact

1. **Reveals** early signals of where private solutions can align with Saudi Arabia's AI priorities.
2. **Maps** partnerships and policies to uncover new contracting and localization opportunities.
3. **Reduces** friction for companies entering the market by translating public data into actionable insight.

Infrastructure & Data Sovereignty Map

Mapping the digital backbone powering Saudi Arabia's AI transformation.

Purpose

Interactive dashboard mapping the Kingdom's data-center and compute infrastructure – providing visibility into where AI capacity is being built.

What It Does

- **Visualizes** all major data-center projects (AWS, STC, HUMAIN, STC, DataVolt, etc.) by capacity, ownership, and region.
- **Tracks** total compute growth across regions, including GW capacity, storage, and network reach.
- **Benchmarks** Saudi progress against regional and global data-sovereignty and infrastructure leaders.

Why It Matters

Enables private-sector entities to identify where cloud and compute capacity already exists – providing the confidence to establish or expand operations in the Kingdom.

The Insight Series

A strategic intelligence layer that transforms *The Aqool Wire's* data into actionable foresight.

Insight Co-Pilot

Powered by *The Aqool Wire's* unified data engine, the *Insight Co-Pilot* transforms thousands of verified data points into an interactive foresight layer, where users can ask, simulate, and anticipate outcomes in real time.

Sector Deep Dives

Illuminates AI in healthcare, logistics, education, energy, etc - identifying growth bottlenecks and partnership openings.

Monthly & Quarterly Reports

Transforms live data into intelligence reports that reveal trends, risks, and early signals shaping Saudi Arabia's AI economy.

How It Works

From Silos to Synthesis

Built on open-source data like OECD.AI, MAGNiTT, and Saudi Arabia's National Open Data Portal – covering roughly 80% of the baseline intelligence needed.

Trust and Compliance Foundation

Strategy Into Intelligence

Jessica Pino

Founder & Chief Executive Officer.

As a former U.S. diplomat, Jessica worked on development, governance, and economic issues in complex political environments, gaining firsthand insight into how governments make decisions, allocate resources, and manage large-scale national priorities.

Jessica founded Aqool after identifying a consistent gap across policy, investment, and institutional ecosystems: despite massive spending on AI, infrastructure, and innovation, decision-makers lack a clear, structured view of *what is actually being built, where capital is flowing, and how these pieces connect*. Aqool was created to turn fragmented public information into usable intelligence, bridging policy intent with real-world execution. She translates complex political and economic environments into decision-ready insight-making. Aqool is credible to governments, investors, and institutions navigating the AI transition.

Degrees: Master's in Public Policy (AI & Market Growth) - **London School of Economics**

B.S. in Economics - **Arizona State University**

Technical & Product Roadmap

- ① **Deliver** Infrastructure v1 (Alpha → MVP) and data Sovereignty Map v1
- ② **Publish** first Insight Brief on compute capacity flow
- ③ **Calibrate** back-end data engine to perfection
- ④ **Output:** Working prototype live and visible membership holders

- ① **Integrate** predictive analytics and forward indicators
- ② **Build** benchmarking engine comparing Saudi progress with regional leaders
- ③ **Release** sector deep dives aligned with Vision 2030 priorities
- ④ **Output:** Predictive intelligence layer supporting national AI strategy and policy planning

LETS MAP SAUDI ARABIA'S AI FUTURE — TOGETHER.
